

SureSmile Case Studies

Information and Diagnosis

- Case Type: Class I w/ Class III Tendency - Mild MX crowding and Moderate MD crowding
- SureSmile Practice ID – Orthodontic Specialists of Green Bay
- Patient ID- B8E5
- Patient Information:
 - Age – 17 years and 1 months old
 - Gender – Female
- Patients Primary Complaint:
 - She does not like her smile and crowding
 - She also has concerns about her incisal wear
- Diagnosis (provide clinical analysis of the issue):
 - Slightly asymmetric MX and MD arches
 - Mild MX crowding
 - Moderate MD crowding
 - Moderate deep bite w/ uneven incisal edges

Treatment

- Treatment Information:
 - Treatment Duration: 4.25 months
 - Number of aligners on upper: 8
 - Number of aligners on lower: 11
- Treatment Plan:
 - SureSmile DIY Aligners – OSGB Digital Lab created the initial Treatment Simulation for my review
 - SureSmile Aligners in combination w/ VPro+ to change aligners every week without reducing staging movements
 - IPR performed for distal of L4-4 to resolve crowding
 - Moved U4-4 and L4-4 for MX and MD arch symmetry
 - Correct all rotations, parallel her crowns, and level her incisal edges

Treatment, Cont.

- Results:
 - Achieved correction of MX and MD crowding
 - Achieved MX and MD arch symmetry
 - Leveled her MD Curve of Spee w/ intrusion of L3-3 to open her bite
 - Leveled her MX and MD incisal edges w/ Suremile Aligners and incisal manicuring
- Retention Used: L3-3 lingual splint w/ Essix Plus .035 MX and MD retainers
